

# 1 Numerical Method Break Down

Our conservative update is, for our equations is

$$\bar{q}_j^{n+1} = \bar{q}_j^n - \frac{\Delta t}{\Delta x} \left[ F_{j+\frac{1}{2}} - F_{j-\frac{1}{2}} \right]$$

This converts to (both analytical and numerical)

$$\mathcal{M}q_j^{n+1} = \mathcal{M}q_j^n - \frac{\Delta t}{\Delta x} [\mathcal{F}^{q,v}v_j + \mathcal{F}^{q,q}q_j - \mathcal{F}^{q,v}v_{j-1} - \mathcal{F}^{q,q}q_{j-1}]$$

$$\mathcal{M}q_j^{n+1} = \mathcal{M}q_j^n - \frac{\Delta t}{\Delta x} [\mathcal{F}^{q,v}v_j + \mathcal{F}^{q,q}q_j - \mathcal{F}^{q,v}e^{-ik\Delta x}v_j - \mathcal{F}^{q,q}e^{-ik\Delta x}q_j]$$

Defining  $\mathcal{D}_x = 1 - e^{-ik\Delta x}$

$$\mathcal{M}q_j^{n+1} = \mathcal{M}q_j^n - \frac{\Delta t}{\Delta x} [\mathcal{D}_x \mathcal{F}^{q,v}v_j + \mathcal{D}_x \mathcal{F}^{q,q}q_j]$$

So we have

$$q_j^{n+1} = q_j^n - \frac{\mathcal{D}_x \Delta t}{\mathcal{M} \Delta x} [\mathcal{F}^{q,v}v_j + \mathcal{F}^{q,q}q_j]$$

Thus we have

$$\begin{aligned} \begin{bmatrix} h \\ \mathcal{G}u \end{bmatrix}_j^{n+1} &= \begin{bmatrix} h \\ \mathcal{G}u \end{bmatrix}_j^n - \frac{\mathcal{D}_x \Delta t}{\mathcal{M} \Delta x} \begin{bmatrix} \mathcal{F}^{h,h} & \mathcal{F}^{h,u} \\ \mathcal{F}^{u,h} & \mathcal{F}^{u,u} \end{bmatrix} \begin{bmatrix} h \\ u \end{bmatrix}_j^n \\ \begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} &= \begin{bmatrix} h \\ u \end{bmatrix}_j^n - \frac{\mathcal{D}_x \Delta t}{\mathcal{M} \Delta x} \begin{bmatrix} \mathcal{F}^{h,h} & \mathcal{F}^{h,u} \\ \frac{1}{\mathcal{G}} \mathcal{F}^{u,h} & \frac{1}{\mathcal{G}} \mathcal{F}^{u,u} \end{bmatrix} \begin{bmatrix} h \\ u \end{bmatrix}_j^n \end{aligned}$$

Lets define

$$\begin{aligned} \mathbf{F} &= \frac{\mathcal{D}_x}{\mathcal{M} \Delta x} \begin{bmatrix} \mathcal{F}^{h,h} & \mathcal{F}^{h,u} \\ \frac{1}{\mathcal{G}} \mathcal{F}^{u,h} & \frac{1}{\mathcal{G}} \mathcal{F}^{u,u} \end{bmatrix} \\ \begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} &= \begin{bmatrix} h \\ u \end{bmatrix}_j^n - \Delta t \mathbf{F} \begin{bmatrix} h \\ u \end{bmatrix}_j^n \end{aligned}$$

$$\begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} = (\mathbf{I} - \Delta t \mathbf{F}) \begin{bmatrix} h \\ u \end{bmatrix}_j^n$$

Thats our Euler Step, the difference between this and the previous version is we didn't divide that bottom Row by  $\mathcal{G}$  So we have to change our approximation stuff. Also we would like to know what the analytic value of  $\mathbf{F}$  is and approximations to it.

## 1.1 Analytic

$$\frac{\mathcal{D}_a}{\Delta x \mathcal{M}_a} \mathcal{F}_a^{h,u} = ikH$$

$$\frac{\mathcal{D}_a}{\Delta x \mathcal{M}_a} \mathcal{F}_a^{h,h} = 0$$

$$\frac{\mathcal{D}_a}{\mathcal{G}_a \Delta x \mathcal{M}_a} \mathcal{F}_a^{u,h} = \frac{ikgH}{H + \frac{H^3}{3}k^2} = i\frac{k}{H}gH \frac{3}{3 + H^2k^2}$$

using  $\omega = \pm k\sqrt{gH} \sqrt{\frac{3}{H^2k^2+3}}$ ,  $\omega^2 = k^2gH \frac{3}{H^2k^2+3}$

$$\frac{\mathcal{D}_a}{\mathcal{G} \Delta x \mathcal{M}_a} \mathcal{F}_a^{u,h} = i\frac{k}{H} \frac{\omega^2}{k^2} = -i\frac{\omega^2}{kH}$$

$$\frac{\mathcal{D}_a}{\mathcal{G} \Delta x \mathcal{M}_a} \mathcal{F}_a^{u,u} = 0$$

So we have

$$\mathbf{F} = \begin{bmatrix} 0 & ikH \\ \frac{\omega^2}{ikH} & 0 \end{bmatrix} = \frac{1}{ikH} \begin{bmatrix} 0 & -k^2H^2 \\ \omega^2 & 0 \end{bmatrix}$$

We can diagonalise this ( $A = PDP^{-1}$ ) with the following matrices

$$\mathbf{F} = \frac{1}{ikH} \begin{bmatrix} -\frac{ikH}{\omega} & \frac{ikH}{\omega} \\ 1 & 1 \end{bmatrix} \begin{bmatrix} -ikH\omega & 0 \\ 0 & ikH\omega \end{bmatrix} \begin{bmatrix} -\frac{ikH}{\omega} & \frac{ikH}{\omega} \\ 1 & 1 \end{bmatrix}^{-1}$$

$$\mathbf{F} = \begin{bmatrix} -\frac{ikH}{\omega} & \frac{ikH}{\omega} \\ 1 & 1 \end{bmatrix} \begin{bmatrix} -\omega & 0 \\ 0 & \omega \end{bmatrix} \begin{bmatrix} -\frac{ikH}{\omega} & \frac{ikH}{\omega} \\ 1 & 1 \end{bmatrix}^{-1}$$

We will use the following notation

$$\mathbf{W}_a = \begin{bmatrix} -\omega & 0 \\ 0 & \omega \end{bmatrix}$$

$$\mathbf{S}_a = \begin{bmatrix} -\frac{ikH}{\omega} & \frac{ikH}{\omega} \\ 1 & 1 \end{bmatrix}$$

So we have

$$\mathbf{F}_a = \mathbf{S}_a \mathbf{W}_a \mathbf{S}_a^{-1}$$

## 1.2 First Order

$$\frac{\mathcal{D}}{\Delta x \mathcal{M}_1} \mathcal{F}_1^{h,u} = iHk - \frac{iHk^3}{6}(\Delta x)^2 + O(\Delta x^3)$$

$$\frac{\mathcal{D}}{\Delta x \mathcal{M}_1} \mathcal{F}_1^{h,h} = \frac{k^2 \sqrt{gH}}{2} \Delta x + O(\Delta x^2)$$

$$\frac{\mathcal{D}}{\mathcal{G}_1 \Delta x \mathcal{M}_1} \mathcal{F}_1^{u,h} = \frac{gH}{2} \frac{1 - e^{-ik\Delta x}}{\Delta x} (1 + e^{ik\Delta x}) \left[ H - \frac{H^3}{3} \left( \frac{2 \cos(k\Delta x) - 2}{\Delta x^2} \right) \right]^{-1}$$

$$\frac{\mathcal{D}}{\mathcal{G}_1 \Delta x \mathcal{M}_1} \mathcal{F}_1^{u,h} = \frac{3igk}{H^2 k^2 + 3} - \frac{igk^3(H^2 k^2 + 6)}{4(H^2 k^2 + 3)^2} \Delta x^2 + O(\Delta x^3)$$

$$\frac{\mathcal{D}}{\mathcal{G}_1 \Delta x \mathcal{M}_1} \mathcal{F}_1^{u,u} = -\frac{\sqrt{gH}}{2} \frac{1 - e^{-ik\Delta x}}{\Delta x} [e^{ik\Delta x} - 1]$$

$$\frac{\mathcal{D}}{\mathcal{G}_1 \Delta x \mathcal{M}_1} \mathcal{F}_1^{u,u} = \frac{1}{2} k^2 \sqrt{gH} \Delta x + O(\Delta x^2)$$

So

$$\mathbf{F} = \begin{bmatrix} \frac{k^2 \sqrt{gH}}{2} \Delta x + O(\Delta x^2) & iHk - \frac{iHk^3}{6}(\Delta x)^2 + O(\Delta x^3) \\ \frac{3igk}{H^2 k^2 + 3} - \frac{igk^3(H^2 k^2 + 6)}{4(H^2 k^2 + 3)^2} \Delta x^2 + O(\Delta x^3) & \frac{1}{2} k^2 \sqrt{gH} \Delta x + O(\Delta x^2) \end{bmatrix}$$

$$\mathbf{F} = \begin{bmatrix} \frac{k^2\sqrt{gH}}{2}\Delta x + O(\Delta x^2) & iHk - \frac{iHk^3}{6}(\Delta x)^2 + O(\Delta x^3) \\ i\frac{\omega^2}{Hk} - i\frac{\omega^2}{4kH} \frac{(H^2k^2+6)}{(H^2k^2+3)}\Delta x^2 + O(\Delta x^3) & \frac{1}{2}k^2\sqrt{gH}\Delta x + O(\Delta x^2) \end{bmatrix}$$

$$\mathbf{F} = \begin{bmatrix} \frac{k^2\sqrt{gH}}{2}\Delta x + O(\Delta x^2) & iHk - \frac{iHk^3}{6}(\Delta x)^2 + O(\Delta x^3) \\ i\frac{\omega^2}{Hk} - i\frac{\omega^2}{4kH} \left[1 + \frac{3}{H^2k^2+3}\right] \Delta x^2 + O(\Delta x^3) & \frac{1}{2}k^2\sqrt{gH}\Delta x + O(\Delta x^2) \end{bmatrix}$$

$$\mathbf{F} = \begin{bmatrix} \frac{k^2\sqrt{gH}}{2}\Delta x + O(\Delta x^2) & iHk - \frac{iHk^3}{6}(\Delta x)^2 + O(\Delta x^3) \\ i\frac{\omega^2}{Hk} - i\frac{\omega^2}{4kH} \left[1 + \frac{\omega^2}{k^2gH}\right] \Delta x^2 + O(\Delta x^3) & \frac{1}{2}k^2\sqrt{gH}\Delta x + O(\Delta x^2) \end{bmatrix}$$

$$\mathbf{F} = \begin{bmatrix} \frac{k^2\sqrt{gH}}{2}\Delta x & iHk - \frac{iHk^3}{6}(\Delta x)^2 \\ i\frac{\omega^2}{Hk} - i\frac{\omega^2}{4kH} \left[1 + \frac{\omega^2}{k^2gH}\right] \Delta x^2 & \frac{k^2\sqrt{gH}}{2}\Delta x \end{bmatrix} + O(\Delta x^2)$$

$$\mathbf{F} = \begin{bmatrix} \frac{k^2\sqrt{gH}}{2}\Delta x & iHk - \frac{iHk^3}{6}(\Delta x)^2 \\ i\frac{\omega^2}{Hk} - i\frac{\omega^2}{4kH} \left[1 + \frac{\omega^2}{k^2gH}\right] \Delta x^2 & \frac{k^2\sqrt{gH}}{2}\Delta x \end{bmatrix} + O(\Delta x^2)$$

$$\mathbf{F} = \begin{bmatrix} \frac{k^2\sqrt{gH}}{2}\Delta x & iHk \\ i\frac{\omega^2}{Hk} & \frac{k^2\sqrt{gH}}{2}\Delta x \end{bmatrix} + O(\Delta x^2)$$

We neglect the  $O(\Delta x^2)$  terms and get

$$\mathbf{F}_1 = \begin{bmatrix} \frac{k^2\sqrt{gH}}{2}\Delta x & iHk \\ i\frac{\omega^2}{Hk} & \frac{k^2\sqrt{gH}}{2}\Delta x \end{bmatrix}$$

which has the following eigenvalues

$$\lambda_{1,\pm} = \frac{\pm 2ikH\omega + Hk^3\sqrt{gH}\Delta x}{2Hk}$$

So

$$\mathbf{F}_1 = \mathbf{S}_1 \begin{bmatrix} \lambda_{1,-} & 0 \\ 0 & \lambda_{1,+} \end{bmatrix} \mathbf{S}_1^{-1}$$

$$\begin{aligned}
\begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} &= \left( \mathbf{I} - \Delta t \mathbf{S}_1 \begin{bmatrix} \lambda_{1,-} & 0 \\ 0 & \lambda_{1,+} \end{bmatrix} \mathbf{S}_1^{-1} \right) \begin{bmatrix} h \\ u \end{bmatrix}_j^n \\
\mathbf{S}_1^{-1} \left( \begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} \right) &= \left( \mathbf{S}_1^{-1} - \Delta t \begin{bmatrix} \lambda_{1,-} & 0 \\ 0 & \lambda_{1,+} \end{bmatrix} \mathbf{S}_1^{-1} \right) \begin{bmatrix} h \\ u \end{bmatrix}_j^n \\
\mathbf{S}_1^{-1} \mathcal{D}^t \left( \begin{bmatrix} h \\ u \end{bmatrix}_j^n \right) &= -\Delta t \begin{bmatrix} \lambda_{1,-} & 0 \\ 0 & \lambda_{1,+} \end{bmatrix} \mathbf{S}_1^{-1} \begin{bmatrix} h \\ u \end{bmatrix}_j^n \\
\frac{\mathcal{D}^t}{\Delta t} \left( \mathbf{S}_1^{-1} \begin{bmatrix} h \\ u \end{bmatrix}_j^n \right) &= - \begin{bmatrix} \lambda_{1,-} & 0 \\ 0 & \lambda_{1,+} \end{bmatrix} \left( \mathbf{S}_1^{-1} \begin{bmatrix} h \\ u \end{bmatrix}_j^n \right)
\end{aligned}$$

$$\begin{array}{l} \text{so} \\ \frac{\mathcal{D}^t}{\Delta t} = -\lambda_{1,\pm} \\ \text{So} \end{array}$$

$$\frac{\mathcal{D}^t}{\Delta t} = -\frac{\pm 2ikH\omega + Hk^3\sqrt{gH}\Delta x}{2Hk}$$

$$\frac{\mathcal{D}^t}{\Delta t} = -(\pm i\omega + \frac{1}{2}k^2\sqrt{gH}\Delta x)$$

$$\frac{\mathcal{D}^t}{\Delta t} = \mp i\omega - \frac{1}{2}k^2\sqrt{gH}\Delta x$$

$$\frac{\mathcal{D}^t}{\Delta t} + \frac{1}{2}k^2\sqrt{gH}\Delta x = \mp i\omega$$

$$\pm i \left( \frac{\mathcal{D}^t}{\Delta t} + \frac{1}{2}k^2\sqrt{gH}\Delta x \right) = \omega$$

Can we do it with full analytic values? Ok our matrix is the following

$$\frac{\mathcal{D}}{\Delta x \mathcal{M}_1} \mathcal{F}_1^{h,u} = \frac{1 - e^{-ik\Delta x}}{\Delta x} H \frac{e^{ik\Delta x} + 1}{2}$$

$$\frac{\mathcal{D}}{\Delta x \mathcal{M}_1} \mathcal{F}_1^{h,h} = -\frac{\sqrt{gH}}{2} \frac{1 - e^{-ik\Delta x}}{\Delta x} [e^{ik\Delta x} - 1]$$

$$\frac{\mathcal{D}}{\Delta x \mathcal{G}_1 \mathcal{M}_1} \mathcal{F}_1^{u,h} = \frac{gH}{2} \frac{1 - e^{-ik\Delta x}}{\Delta x} (1 + e^{ik\Delta x}) \left[ H - \frac{H^3}{3} \left( \frac{2 \cos(k\Delta x) - 2}{\Delta x^2} \right) \right]^{-1}$$

$$\frac{\mathcal{D}}{\mathcal{G}_1 \Delta x \mathcal{M}_1} \mathcal{F}_1^{u,u} = -\frac{\sqrt{gH}}{2} \frac{1 - e^{-ik\Delta x}}{\Delta x} [e^{ik\Delta x} - 1]$$

$$\mathbf{F} = \frac{1 - e^{-ik\Delta x}}{\Delta x} \left[ \begin{array}{cc} -\frac{\sqrt{gH}}{2} [e^{ik\Delta x} - 1] & \frac{H e^{\frac{ik\Delta x + 1}{2}}}{2} \\ \frac{g}{2} (1 + e^{ik\Delta x}) \left[ 1 - \frac{H^2}{3} \left( \frac{2 \cos(k\Delta x) - 2}{\Delta x^2} \right) \right]^{-1} & -\frac{\sqrt{gH}}{2} [e^{ik\Delta x} - 1] \end{array} \right]$$

### 1.3 Second Order

$$\begin{aligned} \begin{bmatrix} h \\ u \end{bmatrix}_j^1 &= (\mathbf{I} - \Delta t \mathbf{F}) \begin{bmatrix} h \\ u \end{bmatrix}_j^n \\ \begin{bmatrix} h \\ u \end{bmatrix}_j^2 &= (\mathbf{I} - \Delta t \mathbf{F}) \begin{bmatrix} h \\ u \end{bmatrix}_j^1 \\ \begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} &= \frac{1}{2} \left( \begin{bmatrix} h \\ u \end{bmatrix}_j^n + \begin{bmatrix} h \\ u \end{bmatrix}_j^2 \right) \\ \begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} &= \frac{1}{2} \left( \begin{bmatrix} h \\ u \end{bmatrix}_j^n + (\mathbf{I} - \Delta t \mathbf{F})^2 \begin{bmatrix} h \\ u \end{bmatrix}_j^n \right) \\ \begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} &= \frac{1}{2} (\mathbf{I} + (\mathbf{I} - \Delta t \mathbf{F})^2) \begin{bmatrix} h \\ u \end{bmatrix}_j^n \\ \begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} &= \frac{1}{2} (\mathbf{I} + \mathbf{I} - 2\Delta t \mathbf{F} + \Delta t^2 \mathbf{F}^2) \begin{bmatrix} h \\ u \end{bmatrix}_j^n \\ \begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} &= \frac{1}{2} (2\mathbf{I} - 2\Delta t \mathbf{F} + \Delta t^2 \mathbf{F}^2) \begin{bmatrix} h \\ u \end{bmatrix}_j^n \end{aligned}$$

lets say we have

$$\mathbf{F}_2 = \mathbf{S}_2 \begin{bmatrix} \lambda_{2,-} & 0 \\ 0 & \lambda_{2,+} \end{bmatrix} \mathbf{S}_2^{-1}$$

$$\begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} = \frac{1}{2} \left( 2\mathbf{I} - 2\Delta t \mathbf{S}_2 \begin{bmatrix} \lambda_{2,-} & 0 \\ 0 & \lambda_{2,+} \end{bmatrix} \mathbf{S}_2^{-1} + \Delta t^2 \mathbf{S}_2 \begin{bmatrix} \lambda_{2,-}^2 & 0 \\ 0 & \lambda_{2,+}^2 \end{bmatrix} \mathbf{S}_2^{-1} \right) \begin{bmatrix} h \\ u \end{bmatrix}_j^n$$

$$\mathbf{S}_2^{-1} \begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} = \frac{1}{2} \left( 2\mathbf{S}_2^{-1} - 2\Delta t \begin{bmatrix} \lambda_{2,-} & 0 \\ 0 & \lambda_{2,+} \end{bmatrix} \mathbf{S}_2^{-1} + \Delta t^2 \begin{bmatrix} \lambda_{2,-}^2 & 0 \\ 0 & \lambda_{2,+}^2 \end{bmatrix} \mathbf{S}_2^{-1} \right) \begin{bmatrix} h \\ u \end{bmatrix}_j^n$$

$$\mathbf{S}_2^{-1} \begin{bmatrix} h \\ u \end{bmatrix}_j^{n+1} = \frac{1}{2} \left( 2\mathbf{S}_2^{-1} + \begin{bmatrix} \Delta t^2 \lambda_{2,-}^2 - 2\Delta t \lambda_{2,-} & 0 \\ 0 & \Delta t^2 \lambda_{2,+}^2 - 2\Delta t \lambda_{2,-} \end{bmatrix} \mathbf{S}_2^{-1} \right) \begin{bmatrix} h \\ u \end{bmatrix}_j^n$$

$$e^{i\omega\Delta t} \left( \mathbf{S}_2^{-1} \begin{bmatrix} h \\ u \end{bmatrix}_j^n \right) = \frac{1}{2} \left( 2 + \begin{bmatrix} \Delta t^2 \lambda_{2,-}^2 - 2\Delta t \lambda_{2,-} & 0 \\ 0 & \Delta t^2 \lambda_{2,+}^2 - 2\Delta t \lambda_{2,-} \end{bmatrix} \right) \left( \mathbf{S}_2^{-1} \begin{bmatrix} h \\ u \end{bmatrix}_j^n \right)$$

$$e^{i\omega\Delta t} \left( \mathbf{S}_2^{-1} \begin{bmatrix} h \\ u \end{bmatrix}_j^n \right) = \frac{1}{2} \begin{bmatrix} 2 + \Delta t^2 \lambda_{2,-}^2 - 2\Delta t \lambda_{2,-} & 0 \\ 0 & 2 + \Delta t^2 \lambda_{2,+}^2 - 2\Delta t \lambda_{2,-} \end{bmatrix} \left( \mathbf{S}_2^{-1} \begin{bmatrix} h \\ u \end{bmatrix}_j^n \right)$$

So we have

$$e^{i\omega\Delta t} = 1 + \frac{1}{2} \Delta t^2 \lambda_{2,\pm}^2 - \Delta t \lambda_{2,\pm}$$

#### 1.4 Third Order

$$\begin{bmatrix} h \\ u \end{bmatrix}^1 = (\mathbf{I} - \Delta t \mathbf{F}_3) \begin{bmatrix} h \\ u \end{bmatrix}^n$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^2 = (\mathbf{I} - \Delta t \mathbf{F}_3) \begin{bmatrix} h \\ u \end{bmatrix}^1$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^3 = \frac{3}{4} \begin{bmatrix} h \\ u \end{bmatrix}^n + \frac{1}{4} \begin{bmatrix} h \\ u \end{bmatrix}^2$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^4 = (\mathbf{I} - \Delta t \mathbf{F}_3) \begin{bmatrix} h \\ u \end{bmatrix}^3$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^{n+1} = \frac{1}{3} \begin{bmatrix} h \\ u \end{bmatrix}^n + \frac{2}{3} \begin{bmatrix} h \\ u \end{bmatrix}^4$$

$$\begin{aligned}\begin{bmatrix} h \\ u \end{bmatrix}^3 &= \frac{3}{4} \begin{bmatrix} h \\ u \end{bmatrix}^n + \frac{1}{4}(\mathbf{I} - \Delta t \mathbf{F}_3)^2 \begin{bmatrix} h \\ u \end{bmatrix}^n \\ \begin{bmatrix} h \\ u \end{bmatrix}^3 &= \left( \frac{3}{4} \mathbf{I} + \frac{1}{4}(\mathbf{I} - \Delta t \mathbf{F}_3)^2 \right) \begin{bmatrix} h \\ u \end{bmatrix}^n\end{aligned}$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^{n+1} = \frac{1}{3} \begin{bmatrix} h \\ u \end{bmatrix}^n + \frac{2}{3}(\mathbf{I} - \Delta t \mathbf{F}_3) \left( \frac{3}{4} \mathbf{I} + \frac{1}{4}(\mathbf{I} - \Delta t \mathbf{F}_3)^2 \right) \begin{bmatrix} h \\ u \end{bmatrix}^n$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^{n+1} = \left( \frac{1}{3} \mathbf{I} + \frac{2}{3}(\mathbf{I} - \Delta t \mathbf{F}_3) \left( \frac{3}{4} \mathbf{I} + \frac{1}{4}(\mathbf{I} - \Delta t \mathbf{F}_3)^2 \right) \right) \begin{bmatrix} h \\ u \end{bmatrix}^n$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^{n+1} = \left( \frac{1}{3} \mathbf{I} + (\mathbf{I} - \Delta t \mathbf{F}_3) \left( \frac{1}{2} \mathbf{I} + \frac{1}{6}(\mathbf{I} - 2\Delta t \mathbf{F}_3 + \Delta t^2 \mathbf{F}_3^2) \right) \right) \begin{bmatrix} h \\ u \end{bmatrix}^n$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^{n+1} = \left( \frac{1}{3} \mathbf{I} + (\mathbf{I} - \Delta t \mathbf{F}_3) \left( \frac{2}{3} \mathbf{I} - \frac{1}{3} \Delta t \mathbf{F}_3 + \frac{1}{6} \Delta t^2 \mathbf{F}_3^2 \right) \right) \begin{bmatrix} h \\ u \end{bmatrix}^n$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^{n+1} = \left( \frac{1}{3} \mathbf{I} + \frac{2}{3} \mathbf{I} - \frac{1}{3} \Delta t \mathbf{F}_3 + \frac{1}{6} \Delta t^2 \mathbf{F}_3^2 + (-\Delta t \mathbf{F}_3) \left( \frac{2}{3} \mathbf{I} - \frac{1}{3} \Delta t \mathbf{F}_3 + \frac{1}{6} \Delta t^2 \mathbf{F}_3^2 \right) \right) \begin{bmatrix} h \\ u \end{bmatrix}^n$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^{n+1} = \left( \mathbf{I} - \frac{1}{3} \Delta t \mathbf{F}_3 + \frac{1}{6} \Delta t^2 \mathbf{F}_3^2 - \frac{2}{3} \Delta t \mathbf{F}_3 + \frac{1}{3} \Delta t \mathbf{F}_3 \Delta t \mathbf{F}_3 - \frac{1}{6} \Delta t^2 \mathbf{F}_3^2 \Delta t \mathbf{F}_3 \right) \begin{bmatrix} h \\ u \end{bmatrix}^n$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^{n+1} = \left( \mathbf{I} - \mathbf{F}_3 + \frac{1}{6} \Delta t^2 \mathbf{F}_3^2 + \frac{1}{3} \Delta t^2 \mathbf{F}_3^2 - \frac{1}{6} \Delta t^3 \mathbf{F}_3^3 \right) \begin{bmatrix} h \\ u \end{bmatrix}^n$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^{n+1} = \left( \mathbf{I} - \Delta t \mathbf{F}_3 + \frac{1}{2} \Delta t^2 \mathbf{F}_3^2 - \frac{1}{6} \Delta t^3 \mathbf{F}_3^3 \right) \begin{bmatrix} h \\ u \end{bmatrix}^n$$

lets say we have

$$\mathbf{F}_3 = \mathbf{S}_3 \mathbf{D}_3 \mathbf{S}_3^{-1}$$

$$\begin{bmatrix} h \\ u \end{bmatrix}^{n+1} = \left( \mathbf{I} - \Delta t \mathbf{S}_3 \mathbf{D}_3 \mathbf{S}_3^{-1} + \frac{1}{2} \Delta t^2 \mathbf{S}_3 \mathbf{D}_3^2 \mathbf{S}_3^{-1} - \frac{1}{6} \Delta t^3 \mathbf{S}_3 \mathbf{D}_3^3 \mathbf{S}_3^{-1} \right) \begin{bmatrix} h \\ u \end{bmatrix}^n$$

$$\mathbf{S}_3^{-1} \begin{bmatrix} h \\ u \end{bmatrix}^{n+1} = \left( \mathbf{S}_3^{-1} - \Delta t \mathbf{D}_3 \mathbf{S}_3^{-1} + \frac{1}{2} \Delta t^2 \mathbf{D}_3^2 \mathbf{S}_3^{-1} - \frac{1}{6} \Delta t^3 \mathbf{D}_3^3 \mathbf{S}_3^{-1} \right) \begin{bmatrix} h \\ u \end{bmatrix}^n$$

$$e^{i\omega\Delta t} \mathbf{S}_3^{-1} \begin{bmatrix} h \\ u \end{bmatrix}^n = \left( \mathbf{I} - \Delta t \mathbf{D}_3 + \frac{1}{2} \Delta t^2 \mathbf{D}_3^2 - \frac{1}{6} \Delta t^3 \mathbf{D}_3^3 \right) \mathbf{S}_3^{-1} \begin{bmatrix} h \\ u \end{bmatrix}^n$$

$$e^{i\omega\Delta t} \mathbf{S}_3^{-1} \begin{bmatrix} h \\ u \end{bmatrix}^n = \begin{bmatrix} 1 - \Delta t \lambda_{3,-} + \frac{\Delta t^2}{2} \lambda_{3,-}^2 - \frac{\Delta t^3}{6} \lambda_{3,-}^3 & 0 \\ 0 & 1 - \Delta t \lambda_{3,+} + \frac{\Delta t^2}{2} \lambda_{3,+}^2 - \frac{\Delta t^3}{6} \lambda_{3,+}^3 \end{bmatrix} \mathbf{S}_3^{-1} \begin{bmatrix} h \\ u \end{bmatrix}^n$$

$$e^{i\omega\Delta t} = 1 - \Delta t \lambda_{3,\pm} + \frac{\Delta t^2}{2} \lambda_{3,\pm}^2 - \frac{\Delta t^3}{6} \lambda_{3,\pm}^3$$
